

SAI GREESHMA GANDHAM

sgandha2@asu.edu | (623)-707 6561 | <https://www.linkedin.com/in/sai-g-76003b294>

EDUCATION

Masters in computer engineering (Computer Systems)

Arizona State University

Courses: Mobile Computing, Software Design, Foundations of Algorithms, Python for Rapid Engineering Solutions, Probability and Random Processes, Data Visualization

May 2023

Tempe

Bachelor of Technology in Electrical Engineering

Vardhaman College of Engineering

Related Coursework: Data Structures, Operating Systems, C Programming

July 2021

India

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, C, C++, C#, SQL, MATLAB, R, Data Structures, Bash
- **Web Development:** HTML, CSS, ReactJS, Nodejs, AngularJS, Spring framework, Spring boot, Spring Security, Django, React Native, Bootstrap, JSP, JSON.
- **Technologies and Tools:** REST API, Docker, AWS EC2, S3, AWS Lambda, Splunk, Apace ANT
- **Databases:** MySQL, SQL, MongoDB, Oracle, PostgreSQL, Amazon DynamoDB
- **Frameworks & Other Skills:** Android Development, Hadoop, Tensorflow, Hibernate, Flink, Apache spark, Servlets, jQuery, XML, Spark, Kafka, Jenkins, Kubernetes, AWS, Azure, Maven, Gradle, Junit, IntelliJ, Eclipse, Postman, Tomcat, GIT, GitHub, Agile, Jira, Scrum, MATLAB, Unix, Visual Studio

EXPERIENCE

Full Stack Developer: American Express | Phoenix, USA

Oct23 – Present

- Developing and optimizing controllers, interfaces, and implementation classes for a Spring MVC framework utilizing a microservice architecture with Spring Boot-based services through **REST**.
- Creating and injecting Spring services, Spring controllers, and DAOs to achieve dependency injection and wire objects of business classes, aiming to optimize code modularity by 25%.
- Implementing **Spring JPA & ORM framework** to enable seamless **CRUD** operations and improve data retrieval speed by 30%.
- Deploying Spring Boot-based Microservices **Docker** containers using Amazon **ECS** container services and **Jenkins CI/CD** pipelines, aiming to reduce deployment time by 50% and improve scalability and reliability.
- Involved in writing test cases using **JUnit** and **Mockito** framework.
- Utilizing Postman to test the API workflow on **JSON** files, ensuring 95% accuracy in API response and functionality.
- Developed and maintained backend services using **Java**, ensuring high performance and responsiveness to requests from the front-end.
- Implemented microservices architecture with **Spring Boot**, enhancing modularity and scalability of the application.
- Utilized **Vertex** for building reactive applications, improving the system's efficiency and concurrency handling.
- Designed and optimized payment processing workflows, ensuring secure and reliable transactions and integrated with various payment gateways and third-party services, ensuring seamless payment experiences for merchants.
- Performed unit and integration testing to ensure the quality and functionality of the application.
- Monitored and resolved production issues, maintaining a high level of system uptime and performance.
- Participated in **Agile** development processes, contributing to sprint planning, stand-ups, and retrospectives.

Teaching Assistant: Arizona State University

Aug22 – Dec22

- Assisted in the delivery of undergraduate-level Java and Python courses, providing support to faculty in lecture preparation, lab sessions, and course materials.
- Evaluated and graded assignments, projects, and exams, ensuring consistent and fair assessment of students' understanding and skills in Java and Python.
- Led and supervised lab sessions and coding workshops, designed to enhance hands-on experience with Java and Python programming.

Software Developer: Aham Learning Hub, | India

July20 - July21

- Launched a responsive and user-friendly website aimed at providing students with an intuitive learning experience.
- Developed application using **Spring Framework** that leverages classical **Model View Controller (MVC)** architecture.
- Built **Micro Services** using **Spring Boot** with continuous deployment and continuous integration. Implemented modules into **Node.JS** to integrate with designs and requirements.
- Written **Junit** test cases to increase the code coverage to 90 percent and above.
- Worked on Front end development utilizing **HTML5, CSS3, and JavaScript** leveraging the **Bootstrap** framework and a **Java backend**.
- Utilized tools for daily tasks including **IDEs**, debuggers, build tools, **Git**, system administration, and Unix tools.

PROJECTS

Android App for Covid-19 Symptoms Tracker

Fall '22

- Developed a comprehensive Android application aimed at tracking COVID-19 symptoms utilizing diverse health monitoring features.
- Integrated heart rate detection functionality to monitor users' heart rates within the app.
- Designed and created a 13-symptom logging page, enabling users to record COVID-19 symptoms efficiently.
- Successfully stored symptom data locally on the mobile device, ensuring user privacy and accessibility.
- Developed a user-friendly and effective tool for users to monitor and record COVID-19 symptoms, contributing to health awareness and data management during the pandemic.

Technologies Used: Android Studio, Java, SQL

Web Store Applications

Summer '22

- Implemented functionalities for adding, updating, and removing products from the store.
- Developed a reporting system to provide detailed insights into product performance, sales, inventory, or any other relevant metrics.
- Access to view and manage customer information, including order history or preferences.
- Enabled users to create accounts and log in securely and provided a user-friendly interface for browsing and viewing available products in the store.

Technologies Used: HTML5, CSS3, JavaScript, Bootstrap, PHP, jQuery, MySQL Server, Java, Servlet

Financial Banking Application

Fall '21

- Designed and potentially implemented a comprehensive banking system handling personal and company accounts, transactions, interest computation, and report generation.
- Created a structured class diagram illustrating the relationships, attributes, and methods of various classes within the banking system.
- Identified and mapped out the functional requirements for personal and company accounts, money handling, deposits, withdrawals, interest calculations, and report generation.
- **Technologies Used:** Java, JavaFX, Design patterns (Singleton, Prototype, Factory Method, Command, Proxy, Abstract Factory, Visitor)
